

GENOMER BIOTECHNOLOGY

2026 Q1 Activity Report

January — March 2026

Prepared by: Ilker Kadiroztürk

Date: March 2026

2. Turkey — Private Laboratory Groups

3

Active negotiations are underway with five leading private laboratory groups in Turkey. Target product portfolio: Femobiome, Androbiome, Enterobiome and HPV kits.

Ahenk Laboratories

AGREEMENT SECURED

Agreement has been reached and instrument installation is pending. Operations will initially begin with **Femobiome, Androbiome and Enterobiome** tests, with the goal of also capturing their HPV business going forward. Ahenk currently works with Anatolia for HPV testing and their HPV volumes are quite high.

Potential: With 5 branches in Istanbul, Ahenk is Turkey's leading private laboratory in terms of the number of external institutions it serves. Their sample volumes are very high. They have a strong field marketing team and have already begun promoting our tests in the field. Their well-established reputation in the industry will make them both an excellent starting point and a powerful reference account.

Biruni + Centro Laboratories

PRICING STAGE

Biruni is one of Turkey's largest private laboratory groups and also owns Centro Laboratories. We have met with their laboratory management and they have shown strong interest. We also met directly with OB-GYN physicians who work with Centro Laboratories and relayed their requests for Femobiome testing.

We informed them of our upcoming launch at Ahenk. Kit pricing was submitted last week; we are awaiting their response.

Synevo Laboratories

PRICING STAGE

Synevo is an international laboratory group with active operations in Turkey. During our meeting with their laboratory division, they showed strong interest in the microbiome kits and indicated they would request a demo. Discussions with their procurement department have begun.

We expect Synevo to move forward once Ahenk is operational and serves as a reference.

Düzen Laboratories

INITIAL CONTACT

A phone call was conducted with their laboratory team and correspondence has been exchanged. Their headquarters are in Ankara, and an in-person visit is being planned for the coming weeks.

Ataşehir Genetik / Datagen Laboratories

IN DISCUSSION

A genetics laboratory group headquartered in Kayseri with additional facilities in Istanbul Ataşehir. They have contracts with numerous private and public hospitals; city hospitals in Kayseri, Manisa, Konya and similar provinces outsource their genetics testing to this laboratory.

The laboratory director has been met with and has given approval. A meeting with the laboratory owner is scheduled for next week. Significant potential is identified for Femobiome, Androbiome, Enterobiome and HPV.

3. Turkey — Private Hospital Groups

4

MLP Care (Medical Park + Liv Hospitals + İstinye University) IN DISCUSSION

MLP Care is one of Turkey's largest private hospital groups, operating hospitals across multiple provinces. Historically, the group has outsourced most of its PCR testing to external laboratories, but is now in the process of building its in-house PCR capacity. This presents a significant opportunity for us.

We met with **Şirin Hanım**, who heads procurement for the entire group. They expressed strong interest in Femobiome, Androbiome and Enterobiome tests. She also noted that their physicians have been pleased with DNA Technology's HPV products. An instrument was previously installed at their Antalya hospitals by Paşa Bey, and they have occasionally outsourced these tests to Gelişim as a reference laboratory.

Potential: Given their daily patient volumes, the potential here is substantial. Instrument placement at multiple hospitals is feasible. Göztepe hospitals are currently the most active site for PCR testing within the group. We discussed joint clinician engagement activities with Şirin Hanım, as well as demand generation through OB-GYN and pediatric gastroenterology departments across the group's hospitals.

Management Action Required for MLP Care:

1. Official authorization letter confirming Genomer's responsibility for DNA Technology projects in Turkey
2. Published scientific articles and clinical research documentation from Russia

Note: Gelişim Laboratory may continue operating within its own facility; however, Genomer needs to be formally authorized for all other institutional projects, as previously discussed. Since Gelişim finds it more profitable to run tests in-house, they have not been actively marketing to external institutions. We intend to step in and significantly grow test volumes at these accounts.

Florence Nightingale Hospitals DEMAND GENERATION

Hospital visits are ongoing. We are meeting with both laboratory physicians and OB-GYN specialists. Both sides have shown interest. Based on the demand being generated, we will jointly visit the procurement department in the coming weeks.

Medicana Hospitals PLANNED ENTRY

We met with **Prof. Dr. Ender Pehlivanoğlu**, Head of Pediatric Gastroenterology at Medicana Zincirlikuyu Hospital. He will serve as our Key Opinion Leader (KOL) for Enterobiome Kids. Prof. Pehlivanoğlu will arrange a meeting with the hospital's general manager to facilitate our entry into the institution.

Acıbadem Hospital Group IN DISCUSSION

One of Turkey's largest private hospital groups. The laboratory division has been visited and an appointment with their procurement department has been scheduled for next week.

4.1 Clinical Research Initiatives

Clinical studies are essential for gaining scientific acceptance in the Turkish market and for inclusion in the SUT reimbursement list. Discussions are underway with three university hospitals.

Medipol University Hospital IN DISCUSSION

They are receptive to clinical research collaboration. A phone call has been conducted and an in-person meeting is planned for next week.

Gazi University Faculty of Medicine IN DISCUSSION

We met with **Prof. Dr. Ayşe Meltem Yalınay**, a medical microbiologist whose primary field of expertise is the microbiome. She is favorably inclined toward clinical research collaboration.

Acibadem University MEETING SCHEDULED

They indicated that they have conducted similar clinical studies before. An appointment has been secured for next week.

Strategy: Conducting all studies at a single center is impractical given time and resource constraints. We therefore plan to assign each product line to a different research center — Femobiome at one, Androbiome at another, Enterobiome at a third — and advance them in parallel.

4.2 Key Opinion Leaders (KOL)

Physician	Specialty	Relevant Products
Op. Dr. Murat Emanetoğlu	Obstetrics & Gynecology	Femobiome, Androbiome, HPV
Prof. Dr. Ender Pehlivanoğlu	Pediatric Gastroenterology	Enterobiome Kids

5.1 Congress Plan — TJOD 2026

Turkish Society of Gynecology and Obstetrics (TJOD) Congress

Date: May 13–17, 2026

We are planning both a **speaker sponsorship** and an **exhibition booth** at this congress. Our goal is for Op. Dr. Murat Emanetoğlu to deliver a presentation on our tests. He is a highly respected physician with an extensive professional network and holds leadership positions in several medical associations. He has personally ordered Femoflor and Androflor tests for his patients in the past and is well-versed in the product line.

5.2 SUT (Reimbursement) Strategy

SUT (Sağlık Uygulama Tebliği — Health Implementation Communiqué) is the official regulation issued by Turkey's Social Security Institution (SGK) that governs patient access to healthcare services, treatment reimbursement and payment terms.

Getting our tests included in the SUT list is a **strategic priority**. Once listed, our tests would be reimbursed by both the SGK (state insurance) and private insurance providers. This would:

- Significantly increase test volumes at private hospitals,
- Open the door to public (state) hospitals.

For SUT inclusion, the **Turkish Society of Gynecology** needs to formally recommend our tests to the Ministry of Health. This is why participation in the TJOD Congress and building relationships with the society's leadership are critically important. Dr. Emanetoğlu's influence in the field will be leveraged throughout this process.

6. Regional Distribution Strategy

7

6.1 Domestic Distribution in Turkey

Istanbul and Ankara will be managed directly by Genomer. For other provinces, we plan to work with regional distributors. Through my father's longstanding industry contacts, we have begun discussions with distributors who actively hold regional distribution rights for major companies such as Roche, Sysmex and bioMérieux.

Gaziantep Region IN DISCUSSION

We have met with the Roche distributor in Gaziantep. They operate both as a distributor and as a private hospital laboratory operator. They expressed eagerness to get started as soon as possible. An in-person visit to Gaziantep is planned for the coming weeks.

Bursa and Surrounding Region INITIAL CONTACT

We have engaged with a distributor in the Bursa region who holds distribution rights for Roche, Sysmex and bioMérieux. They have shown interest in our tests, and an in-person visit is planned for the coming weeks.

Turkish Republic of Northern Cyprus (TRNC) INITIAL CONTACT

Our Gaziantep-based distributor also operates in Northern Cyprus and has requested to cover this territory as well. Separately, my father met with Oya Talat, wife of former TRNC President Mehmet Ali Talat. We had previously explored project opportunities with them; they have renewed their interest. We will visit them on our next trip to the region.

6.2 International Markets

United States WORK UNDERWAY

Sanem has completed her training with DNA Technology and has begun commercial activities. In the US, laboratories can perform their own validations and start testing without FDA clearance. Several laboratories have expressed interest; however, there are numerous technical questions that need to be addressed. We require your support in answering these questions and in determining our go-forward strategy for this market.

European Union PLANNING STAGE

Upon signing the IVDR contract, the notified body issues an extension letter. This letter enables sales in Europe on a self-declaration basis, provided that receiving laboratories accept it. When the timing is right, we will conduct market research and define our entry strategy.

7. Azerbaijan Market

8

Active engagement is underway with over 14 institutions in Azerbaijan. Instrument installations and kit sales are progressing.

Referans Lab

INSTRUMENT INSTALLED

The largest private laboratory in Azerbaijan. They have begun using Femoflor, Androflor and Enteroflor tests. We expect very significant potential at this account, both due to the high volume of samples they receive from public hospitals and the breadth of their physician marketing network and institutional contracts.

Sunlab Laboratory

INSTALLATION PLANNED

Will be running Femoflor, Androflor, Enteroflor and HPV 21 Quant tests. One of the incoming instruments will be installed at this laboratory.

RDM (Republic Diagnostic Center)

INSTALLATION PLANNED

Will start with Femoflor, Androflor and HPV 21 Quant tests. Instrument installation is being planned.

Sağlam Aile

ORDER PENDING

An existing customer of yours; they will continue working with us. Orders are expected in April. The DT Prime + DT Stream instrument project is underway and we expect it to materialize shortly.

Sefa Genetik Lab

ACTIVE

Interested in HLA, thrombophilia panels, Femoflor, Androflor and Enteroflor. They already have DNA Technology instruments in their facility.

Gömrük Hospital

INSTALLATION PLANNED

Will be running a broad portfolio including single urogenital tests, Femoflor, Androflor, Enteroflor, hepatitis panels and HPV. One of the incoming instruments will be installed at this hospital.

Azerbaijan Medical University Surgical Hospital

INSTALLATION PLANNED

Will be operating the full product portfolio. Instrument installation is being planned.

Bonadea Liv Hospital

PROPOSAL SUBMITTED

This is the Medical Park group's hospital in Azerbaijan. They requested a quote for HPV Quant 21. Discussions are also underway for Femoflor, Androflor and Enteroflor, and they have expressed interest.

Baku Sağlamlık Center

AGREEMENT SECURED

Operated by Azerimed. An agreement has been reached and they will now procure directly from us.

Fetal Center

IN DISCUSSION

Operates in the IVF and genetics space. They are interested in Femoflor and Androflor tests.

Diamed IN DISCUSSION

Discussions are ongoing for hepatitis, HPV, Femoflor and Androflor tests.

Kraton Clinic ACTIVE CUSTOMER

Hepatitis kits from our incoming shipments have been sold to this institution. They will continue purchasing.

Gebele IN DISCUSSION

Discussions are ongoing for hepatitis and urogenital tests.

Medikus Hospital IN DISCUSSION

An institution with potential in both Baku and Ganja. Discussions are underway for Femoflor, Androflor, Enteroflor, HPV and hepatitis tests.

Public Hospitals: Structural changes are taking place in Azerbaijan's public hospital system, including personnel reshuffles. There is ongoing discussion about transferring İcbari Sigorta (the compulsory state insurance body) under the Ministry of Health. These changes may open up new opportunities for us in the public sector. We are closely monitoring the situation and will keep you informed of any developments.
